

Fitting Course

12th March 2026

Agenda

9:45	Welcome & Introduction
10:00	Why is verification important in a hearing aid fitting? The fundamental principles behind hearing and verification methods. Outline differences and benefits of verification and validation.
10:30	Real Ear Measurement and Real Ear to Coupler Difference A deep dive into essential verification techniques. REM is often seen as a test for adults and RECD for paediatrics, however both are applicable to either population group. We will cover how to select, perform and analyse these methods, so that you will feel confident using them in your clinic.
11:15	Comfort Break
11:30	Workshop: REM and AutoREM Hands on experience performing REM and AutoREM techniques. Oticon hearing aids will be provided. Practical sheets will be issued to support learning.
12:30	Lunch
13:15	Fitting rationales, fitting strategies for hearing loss types and AutoREM: Getting the most out of your fitting. (Guest Speaker: Alison Stone, Training Manager, Oticon UK) How do the different fitting rationales compare and how do you decide which to choose? Once you have your starting point, how can you customise the fitting further to meet your patient's listening needs? We'll address these questions and more, including tips and tricks in the fitting software.
14:15	Workshop: Hearing aid fine tuning Hands on experience with hearing aid fitting software using Oticon hearing aids. Practical interpretation of the results.
15:15	Comfort Break
15:30	Question & Answer, A.O.B and course review An opportunity for discussion, questions, and a course content review.
16:00	Finish / Close
